Question 3
Select the appropriate response
Which of the following is true, regarding an entity sharing cardholder data with a service provider?
The service provider must be validated as being PCI DSS compliant before the entity engages with the service provider.
The service provider may only store, process, or transmit cardholder data that is encrypted; and is therefore out of scope for PCI DSS.
The service provider must produce four quarterly ASV scan results, and a penetration test report, before the entity engages with the service provider.
The entity must have an established process for engaging service providers, including proper due diligence prior to engagement.
